Re: ACES Analyser 4040 / 4120

Dear Sirs:

This letter is confirming that subsequent to the earlier validation exercises carried out, we do recommend the use of the above mentioned analyser models in lieu of the 1700 ACES model.

The specific applications under discussion are Pratt and Whitney Canada turboprop, turboshaft, and turbofan overhauled engine vibration testing, including surveys and balancing (propeller, low pressure turbine, high pressure turbine, fan).

Yours truly,

PRATT & WHITNEY CANADA CORP.
